**Venus of Milo**

Ancient statue of Aphrodite, now in Paris at the Louvre; carved by a sculptor of Antioch on the Maeander River in 150 BC, it was found on Melos in 1820. The general composition derives from 4th-century Corinthian statue. The action and modernized drapery give the Venus great nobility. The statue is a conspicuous example of the Hellenistic sculptural tradition's academic traits and close reliance on older masterpieces.
